EECS 3311 | Software Design

Sample course outline - Fall 2026

Fictional course created for testing calendar event extraction. Not an official university document.

Course information

Term: September 8 - December 4, 2026
Instructor: Dr. Adrian Patel (fictional)
Lectures: Tuesdays and Thursdays, 1:00 PM - 2:15 PM, Engineering Building 204
Lab: Selected Wednesdays, 3:00 PM - 4:30 PM, Computing Lab 310
Office hours: Fridays, 11:00 AM - 12:00 PM, online

Course description

This course introduces object-oriented software design with emphasis on maintainability, reusable solutions and collaboration. Students analyze requirements, develop UML models, apply established design patterns and build a multi-component software application. Lectures are supported by programming exercises, design discussions and a staged term project.

Assessment breakdown

Assessment	Weight
Online quizzes (6 × 5%)	30%
Practical lab test	15%
Term project - Stage 1 design	10%
Term project - Stage 2 implementation	20%
Final examination	25%

Course delivery and learning topics

The term begins with UML and object-oriented design principles, followed by creational, structural and behavioral patterns. Later classes examine refactoring, software architecture and integration of design decisions. The weekly lecture topics are general course content; the individually dated assessments and project milestones appear on the following page.

Project expectations

Students work on one software application throughout the term. The first submission describes the proposed features, UML design and intended patterns. The second submission presents a working implementation, updated diagrams and a demonstration of the application's behavior. Each stage has its own submission deadline.

EECS 3311 | Assessments and Important Dates

The following schedule identifies graded activities and project milestones for Fall 2026. All online quizzes and project submissions close at **11:59 PM** on the listed date. In-person assessments have fixed start and end times. Dates, rooms and deadlines are fictional.

Important dated activities and deadlines

Date	Time	Event / deadline
Sep 17 (Thu)	11:59 PM	**Quiz 1: UML Class Relationships** Online course portal
Oct 1 (Thu)	11:59 PM	**Quiz 2: SOLID and Design Principles** Online course portal
Oct 15 (Thu)	11:59 PM	**Quiz 3: Creational Patterns** Online course portal
Oct 23 (Fri)	11:59 PM	**Term Project - Stage 1 Design Report Due** GitHub repository and course submission portal
Oct 28 (Wed)	3:00 PM - 4:30 PM	**Practical Lab Test: Pattern Implementation** Computing Lab 310
Nov 5 (Thu)	11:59 PM	**Quiz 4: Structural Patterns** Online course portal
Nov 10 (Tue)	11:59 PM	**Term Project - Stage 2 Implementation Due** Source code, report and demonstration links
Nov 19 (Thu)	11:59 PM	**Quiz 5: Behavioral Patterns** Online course portal
Dec 3 (Thu)	11:59 PM	**Quiz 6: Refactoring and Architecture** Online course portal
Dec 21 (Mon)	2:00 PM - 4:00 PM	**Final Examination** Comprehensive; Examination Hall C

Submission and attendance notes

Quiz attempts must be completed before the posted closing time. Project submissions include both the requested documentation and the associated source-code repository. Attend the practical lab test in the assigned laboratory. Ordinary lecture, office-hour and lab meeting information on page one is not an additional list of individually dated assessments.

Reading week and examination period

Regular lectures are paused during the October reading week. The final examination takes place after classes conclude in December. Students should consult the course portal for any official changes to assessment arrangements.
